How Can I Use Multimedia Course Content to Create a Tutoring Library for Students?

Today's students want flexibility and variability in the classroom. They can find the standard practices of lecture, activity, and test too monotonous which causes disengagement. After all, they live in the information age where content is available anywhere at any time. Providing alternatives content delivery like videos, audio, and podcasts can breathe new life into the classroom and greatly enhance their engagement with course material.

In this Magna 20-Minute Mentor, Robb Beane, MEd, guides you through the key to reinvigorating the learning experience—the multimedia tutoring library. With this innovative approach, you will not only increase student engagement but also improve accessibility and cater to the unique learning needs of every student in your classroom.

Upon completion of this program, you'll be able to:

- Understand the basics of creating a tutoring library
- Recognize the pedagogical benefits of implementing a tutoring library
- Discover tools to help create media for a tutoring library
