How to Supercharge Your Slide Deck

Creating effective slide presentations is crucial for enhancing student learning in traditional, online, or hybrid classrooms. Jeremy Rentz, Professor at Trine University, will show you how to transform your presentations into powerful learning tools. Rentz will also guide you through the art of dual coding—combining images and words to enhance retention—and offers practical tips for creating effective handouts that reinforce your message and support student note-taking. By the end of this program, you will have the skills to create visually engaging, easy-to-digest presentations that promote better learning outcomes and help students process and retain information effectively.

Upon completion of this program, you'll be able to:

- Discuss how limiting words on slides and using readable fonts can reduce cognitive load
- Incorporate dual coding in the classroom
- Apply the "less is more" approach to slides
- Analyze the impact of text-heavy slides on student attention and learning, specifically in relation to subvocalization
- Create effective handouts that integrate key graphics and promote student engagement through note-taking
